MILKING MACHINE. [1962] [7]p.  
Order from OTS or SLA \$1.10

62-18654

Trans. of Swedish patent 26,015, 29 Nov 06, cl. 35:h1.

DESCRIPTORS: Agricultural machines, \*Milking machines, Design, Machines.

This new milking machine is based on the intermittent or rhythmical working of the nipples outward, which is simultaneous with the intermittent or rhythmical action of sucking. For the removal of the milked squeezed out, continuous sucking is also employed. To bring about the necessary method of operation, any suitable device may be used for the purpose, for example, a purely mechanical device which can operate independently of the device causing the sucking. It is, however, more suitable to generate within the nipple cups, a pulsating (over)

From the Centre for Information Studies  
London, England

DESCRIPTION: Experimental data. \*Adiabatic gas flow. Gas flow. Liquids. Films. Thickness. Phase studies. Velocity. Distribution. Pressure. Reduction. Reactor coolants. Power reactors.

C226139

All the data obtained on film thickness, phase and velocity distribution and pressure drops in a cylindrical test section are reported.

Office of Technical Services
